The Graph Algorithms Playground and Graph Data Science Library

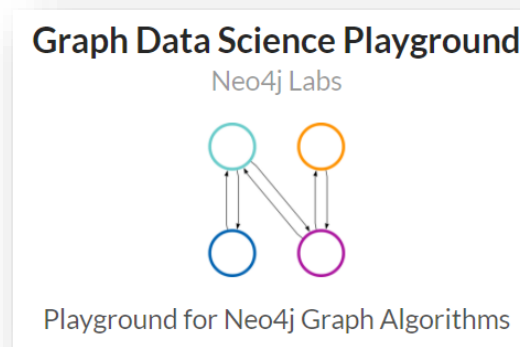

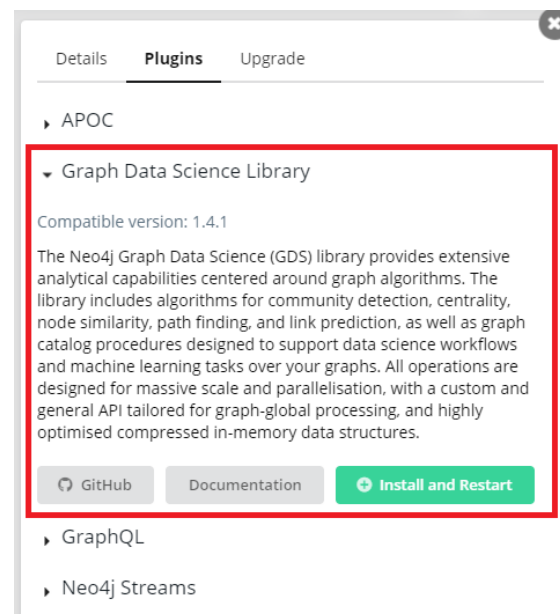

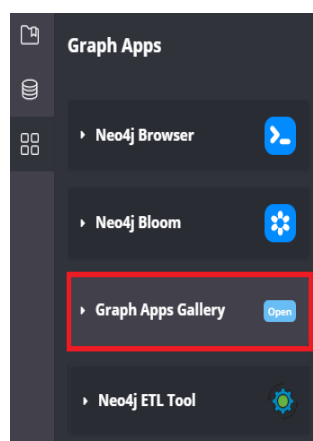

When <u>Neo4j Desktop</u> installed and create new project already. That it's time to install the *Graph Data Science Library*. Select *Add Plugin*, and then you'll see the following screen

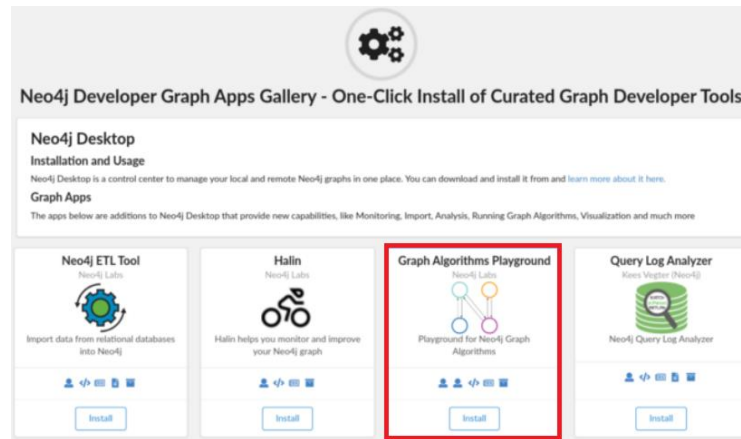

Click on the install button for the Graph Data Science Library, and make sure you've also installed APOC if you haven't done that already!

Once you've done that, on the left hand select button and launch the *Graph Apps Gallery*, and then you'll see the following screen:

We'll then see the following screen, from where we can install the Graph Algorithms Playground

This only works on Mac and Windows at the moment. If like me, you're using Linux, you'll need to paste https://bit.ly/install-neuler into the 'Install Graph Application' form and then click on the *Install* button. That always works.
